AI আত্মবিশ্বাস: 82.0%

Section 2 — Prescribed Medicines | ওষুধের তালিকা

Medicine Name ওষুধের নাম	Dose মাত্রা	Frequency কতবার	Duration কতদিন	Special Notes বিশেষ নির্দেশ
Clotrimazole 1% Cream ক্লোট্রিমাযল ১% ক্রিম	Thin layer	Twice daily (morning & night)	14 days	Apply after washing and thoroughly drying the area
Cetirizine 10 mg Tablet সেটেরিজিন ১০ মগিরা	1 tablet	Once daily at night	7 days	Take with water after dinner — may cause drowsiness

[!] Take these medicines ONLY as directed by your doctor. Do not change dose without consulting your doctor.

[!] এই ওষুধগুলি শুধুমাত্র আপনার চিকিৎসকের নির্দেশে গ্রহণ করুন। নজি নজি ওষুধ পরিবর্তন করবেন না।

Section 3 — Care Instructions | করণীয় ও বর্জনীয়

(+) What to DO

করণীয়

- Keep the affected area clean and completely dry at all times
- Wash the area gently with mild soap and pat dry before applying cream
- Wash all clothing, bedsheets, and towels in hot water (above 60°C)
- Wear loose-fitting, breathable cotton clothing
- Complete the full 14-day course even if rash improves earlier
- Wash hands thoroughly after applying the cream
- Reduce intake of refined sugar and white rice — fungal infections thrive on sugar
- Increase probiotic foods: yogurt (টক দই), fermented foods
- Drink at least 8 glasses of water per day
- Avoid alcohol completely during the treatment course

(-) What NOT to DO

বর্জনীয়

- Do not share towels, clothing, or bedsheets with other family members
- Do not scratch the affected area — it spreads the infection
- Do not apply any talcum powder, coconut oil, or home remedies on the rash
- Do not stop the medicine early even if the rash seems healed
- Avoid tight or synthetic clothing on the affected area
- Do not let pets sleep on your bed — ringworm can spread from animals
- Avoid public swimming pools and shared bathing areas for 3 weeks
- Avoid heavy physical labour that causes excessive sweating on the affected area
- Do not share gym equipment or sports gear without disinfecting

Section 4 — Danger Signs | জরুরি সতর্কতা

[!] DANGER SIGNS — Go to hospital IMMEDIATELY if you have:

[!] এই লক্ষণ দেখলে এখনই হাসপাতালে যান:

- ১০০°F (৩৮°C) এর উপরে জ্বর এবং দাগ ছড়িয়ে পড়া / Fever above 100°F (38°C) with spreading rash
- মুখ, হাত বা লজ্জাস্থানে দ্রুত ছড়িয়ে পড়া / Rash spreads rapidly to face, hands, or genitals
- ত্বক ফুলে যাওয়া, গরম অনুভব হওয়া বা পুঁজ ভরা ফোসকা দেখা দেওয়া / Skin becomes swollen, warm to touch, or develops pus-filled blisters
- শ্বাস নতি বা গলিতে কষ্ট — ওষুধে অ্যালার্জির লক্ষণ হতে পারে / Severe difficulty breathing or swallowing (possible allergic reaction)
- ৭ দিন চিকিৎসার পরও কোনো উন্নতি না হওয়া / Rash does not respond at all after 7 days of treatment

Section 5 — Follow-Up | পুনরায় ডাক্তার দেখানো

Return date: 2026-06-06

তারিখ: 2026-06-06

Return if: If rash spreads beyond current area, develops blisters, or does not begin improving within 7 days

যদি: If rash spreads beyond current area, develops blisters, or does not begin improving within 7 days

Doctor's Notes:

Patient presents with a classical annular (ring-shaped) erythematous plaque on the left forearm, approximately 4 cm diameter, with central clearing. Consistent with Tinea Corporis. KOH preparation not available at this facility — clinical diagnosis made on appearance. AI screening (SkinAI Bangladesh) concurs: Tinea, 82% confidence. Prognosis is excellent with compliance. Advise patient to inform household members for screening.
